SYSTEM NAME	**Crop**
PLANNING PHASE	**Alternative 2**
PLANNING LEVEL	**RMS**
NRCS LANDUSE	**Crop**
PLANNED CONSERVATION PRACTICES	*List conservation practices in the system*
1.	**Alley Cropping - 311**
2.	**Vegetative Barrier - 601**
3.	**Upland Wildlife Habitat Management - 645**
SYSTEM NARRATIVE	*Describe how the practices work together as a system*

CMU 1b sheet and rill, and concentrated flow is reduced by the addition of a vegetative barrier for short-term erosion control and alley cropping for long-term erosion control. The landowner had previously agreed to continue his conservation cropping rotation. He will also be recieving a supplemental income from the nut trees he planted as part of the alley cropping system. There is also increased hunting opportunities with the new system.

RESOURCE CONCERNS	SYSTEM EFFECTS	IMPACTS
Soil Erosion; Sheet & Rill	**sheet and rill erosion meets "T"**	**Soil loss was reduced from 15 T/A/Y to 2 T/A/Y. Quality Criteria was met.**
Soil Deposition; Onsite Damage	**soil deposition is reduced**	**Reduced soil deposition reduced sediment yield. Quality Criteria is met.**
Plant Suitability; To Intended Use	**stiff stemmed grasses and trees are planted that reduce soil loss**	**Plants suitable to Alley Cropping in 5% of cropland to meet landowner objective. Quality Criteria is met.**

Human Economic; Profitability	**crop production is increased**	**Long-term, a good profit is expected. Quality Criteria is met.**
Animal Habitat, Wildlife: Cover &/or Shelter	**wildlife cover is improved**	**Cover & Shelter meet the 30% requirement for the species of concern. Quality Criteria is met.**
Soil Erosion; Concentrated Flow	**concentrated flow has been reduced**	**Erosion is controlled in treated area. Quality Criteria is met.**
